

Integration of forms that were created with the TcHmiDesigner

- Forms that were created with the TcHmiDesigner can be integrated with the help of the DLL "Beckhoff.DesignerFrame.dll" from the Plugins folder
- The XML description files of the forms must be in the folder "System \ Frames". A maximum of 20 forms can be integrated. The XML files are called:
 - o FormDesignerFrame01.xml
 - o FormDesignerFrame02.xml
 - o.
 - o.
 - o FormDesignerFrame20.xml
- Each of the 20 possible forms can be integrated with the help of the menu manager. To do this, switch to the configuration mode (<CTRL> <ALT> <click on the button> and open the "FormsList").
- Select the Beckhoff.DesignerFrame.dll dll from the Plugins folder using the "Load" button and accept the desired form.

- In the menu manager, any key can now be assigned to call up the form.

BECKHOFF

- The "callMethod" function of the menu manager can be used to force reload the XML file (ReloadFrame):
